

Electric Boom Lift Attachment

Electric Boom Lift Attachment - The most common label utilized for electric trucks are the type "E" meaning the lift trucks meets the minimum requirements for fire and electrical hazards. All the forklifts which are described as type E are not suitable for use in hazardous sites. Type "ES" forklifts meet all the requirements of Type "E" lift trucks and have additional apparatus to be able to stop the emission of sparks and limit the surface temperature of forklift parts.

The more specialized lift trucks are the type "ES" electric vehicle and these are not normally accessible. Type "EE" trucks meet all the standards of the ES and E model and have all electric motor and spark producing components totally enclosed. The type "EE" version is then used wherever hazardous surroundings have been identified. Type "EX" trucks are specially designed for use in atmospheres wherever vapors or flammable fibers or dust can be existing. These types of lift trucks are made using no spark generating parts along with other protective measures so as to guarantee optimum safety in the risky applications they could be called upon for.
